STARRAG HECKERT CWK machining centers have proven themselves in the market in countless applications as versatile machining centers that offer high flexibility, efficiency and precision. They are suitable for complex processing of complex workpieces made of steel, cast or light metal. Combining compelling know-how and many innovative ideas, they meet market demands to reduce production and floor time. They constantly aim to reduce non-productive idle and setup times. Large machining centers are ideal for fast, cost-effective and complete machining of large and heavy parts (turning diameter up to 2200 mm, maximum weight 5000 kg). The modular structure offers maximum flexibility and enables the creation of customized manufacturing solutions. The center deals with high-precision, process-optimized and energy-saving processing of housings and prismatic parts, mainly in the agricultural machinery and automotive industry, equipment manufacturing, pump and compressor manufacturing, and the wind energy sector.
