What is a UPS system?

UPS system means uninterruptible power supply, or UPS for short. UPS systems are used to supply critical electrical consumers in the event of recurring faults in the power grid. Today, electrical protection is not only a tool against power outages, but also protects the consumer's IT from poor power quality such as voltage spikes, harmonics or micro-interruptions. There is a wide range of UPS system models with their own characteristics for every situation and consumer need.
