What is a UPS system?

UPS system means uninterruptible power supply, or UPS for short. UPS systems are used to supply critical electrical consumers in the event of recurring faults in the power grid. Today, electrical protection is not only a tool against power outages, but also protects the consumer's IT from poor power quality such as voltage spikes, harmonics or micro-interruptions. There is a wide range of UPS system models with their own characteristics for every situation and consumer need.

Control panel of a Schneider UPS system. It features a red emergency stop button, a green power button, and a grey reset button. Below these buttons is a small LCD display showing a schematic diagram of a power system. To the right of the display are several blue indicator lights and a row of blue push buttons. A white label with technical specifications is located below the buttons. In the top right corner, a black badge reads "Schneider Electric" and "MGE UPS SYSTEMS".
